Credit likely to turn, but High Yield remains vulnerable

Source: Barclays Bloomberg indices; Note: Global OAS is 50% US and 50% European Corp Index OAS

Credit markets, which often lead other markets, seem to be showing early signs of a turn after underperforming for the last six months. The recent recovery in credit and equities has largely conformed to the typical historical pattern seen during wars, when the markets reach their lows just around the time a conflict starts and recover thereafter. However, despite the emergence of a constructive tone, uncertainty around the outcome of the Russia-Ukraine conflict and the potential for a central bank policy mistake still remain. The consequent binary outcomes call for only cautious optimism from investors in our opinion.

Credit markets have had a softer tone to them since October 2021, with a number of micro-indicators weakening at the time. Inflows started flatlining and primary markets saw lacklustre demand. These negative trends gained steam in Q1 2022 as outflows gathered momentum and angst was seen in primary markets with new issue concessions spiking higher and the High Yield primary market nearly grinding to a halt. The heightened sensitivity of credit to liquidity withdrawal seemed to be the cause of the weakness in late 2021. More importantly, credit weakness once again led stock market weakness in early Q1 2022.

Notably, some of these credit market micro-indicators are turning positive again after six months, despite still elevated bond market volatility, a flat yield curve and uncertainties still remaining on the geopolitical front. Flows seem to be stabilising with High Yield ETFs recently seeing heavy inflows, while the primary market is again seeing strong demand as evidenced through minimal new issue concessions and strong levels of oversubscription not seen since H1 2021. We believe these indicators suggest that despite the risks, credit is seeing the emergence of pent-up investor demand after sentiment became overly pessimistic. On the risk front, while central banks still remain hawkish, bond yield curves are reflecting concerns around a recession driven by the risk of a central bank policy mistake which is also reflected in policy rate expectations. However, our expectation is that central banks will remain pragmatic despite the rhetoric, with the Fed unlikely to raise rates eight times this year, as currently priced in by the Fed futures markets. Furthermore, while uncertainty still remains on the geopolitical front, the probability of a broader conflict between Russia and NATO countries seems to have declined with some optimism emerging recently on a resolution. Consequently, it is likely that the credit market dynamics of lighter positioning driving spreads tighter could become self-sustaining in the short to medium term.

High Yield valuations remain concerning however. While the energy sector, which is a reasonable part of US High Yield market, has been boosted by higher oil prices, most of the High Yield universe is highly growth sensitive. As shown in the chart, the spread ratio of High Yield to Investment Grade is hovering around the lowest levels in five years, an unexpected outcome when the 2yr/10yr US Treasury yield curve is flashing recession signals.

Market Assessment

Key developments

- Russia-Ukraine conflict drags on longer than expected, but some investor optimism emerges
- Risk assets recover, confirming the typical pattern seen historically during wars
- Bond yield curves and rate expectations price in the risk of a policy mistake by major central banks, especially the Fed

Zurich's view

Despite the Russia-Ukraine conflict becoming more protracted than many had expected and the consequent human tragedy, stock and credit markets have recovered recently confirming the historical pattern seen during wars. While uncertainties still remain, optimism seems to have emerged among investors that the conflict is unlikely to see a broadening to NATO countries, while a resolution may also be likely in the coming weeks.

Credit markets are showing encouraging signs that suggest pent-up demand is emerging and the recent recovery could become more self-sustaining. Given the leading characteristics of credit, this bodes well for stocks too, which should still outperform credit in the long term.

While economic growth is likely to be hampered but not derailed by higher commodity prices resulting from the Russia-Ukraine conflict, inflation prints remain persistently high. Consequently, central banks remain hawkish and bond curves and interest rate futures seem to be pricing in the risk of a policy mistake, especially by the Fed. We believe central banks are likely to be more pragmatic than markets are expecting. It is our opinion that bond yields are now looking stretched and have room to fall modestly albeit high volatility is likely to persist.

Zurich's view Key developments While the economic outlook is uncertain and vulnerable to an Data show global economic activity Global escalation in the Russia-Ukraine conflict, we do not expect the war to remained firm in March, boosted by trigger a global recession. Global growth will slow materially but, as it is the improving pandemic situation coming from a high level, is not expected to fall below trend. While it is Commodity linkages will drive the too early to gauge the impact, early macro data show that activity was economic impact of the war in resilient in March, with a further rebound in services on the improving Ukraine, amplifying price pressures pandemic situation and firm manufacturing activity. Export orders and supply chain bottlenecks appear to be softening though and price pressures are intense, reflecting disruptions to commodity markets. Central banks have Central banks accelerate policy accelerated policy tightening, confirming that they are not prepared to tightening, with policy risk elevated look through strong price gains, even if they are supply related and due to a challenging mix between accelerated by the war. rising inflation and slowing growth Economic activity remains robust but rising costs keep weighing on Headline inflation accelerates to US consumers' and businesses' minds. The labour market is still very tight, 7.9% YoY in February, the highest in making it difficult for firms to fill open positions. On a positive note, a four decades falling guits rate, lower compensation plans, and flat average hourly Business activity remains robust earnings point to some easing. Despite these promising signs, inflation though rising costs weigh on rates accelerated further in February, with headline CPI reaching 7.9% consumers' minds YoY. As expected, the Fed initiated the tightening cycle with a 25bp rate hike and has signaled a relatively aggressive path going forward, The Fed takes a hawkish stance and increasing the risks of a policy error. The S&P 500 has shown signals a total of seven rate hikes remarkable resilience to both rising yields and soaring energy prices, this year more than recovering from the losses suffered following Russia's invasion of Ukraine. While the Omicron wave created some headwinds for activity, A strong labour market and rising UK consumer spending has rebounded from the weakness observed at wages help to support household the end of last year. Though rising prices keep weighing on spending consumers' minds, a strong labour market and higher wages help to Headline inflation accelerates to support household spending. As expected, the Bank of England 6.2% YoY, the highest since 1992 continued its tightening path, lifting the Bank Rate by another 25bp to 0.75%. Despite the somewhat dovish tone at its latest meeting the BoE The BoE tightens its policy further, is expected to tighten its policy further in the coming months as lifting the Bank Rate from 0.5% to inflation will remain significantly above target, fuelled by soaring energy prices due to the war in Ukraine. Meanwhile, the FTSE 100 has 0.75% shown remarkable resilience in a volatile environment, outperforming most of its developed market peers since the beginning of the year. We still expect the Eurozone economy to grow at an above-trend pace Business surveys show sentiment is Eurozone this year, though the region is now vulnerable to any further internal or impacted more by the war in Ukraine than actual economic external shocks. Growth will be significantly weaker in Q1 and Q2 than previously forecast, but there had been the expectation of very strong activity growth from the start of 2022 because of the bounce back from Covid The ECB announces a quicker end and ongoing monetary and fiscal stimulus. Meanwhile, the ECB to QE despite increasing risks to announced an accelerated pace in the tapering of QE asset growth, focusing on record high purchases because of very high inflation, preparing the ground to inflation raise interest rates later this year. Finally, EU leaders have agreed to bolster European defense capabilities and reduce energy EU leaders pledge to spend more dependency on Russia. However, both objectives are likely to take on defense and reduce energy time, possibly many years, to achieve. dependency on Russia Economic activity was brisk in February, though the data predates the Growth should be resilient, though Switzerland sentiment is likely to deteriorate while the external backdrop war in Ukraine, and some negative impact, particularly on business and household sentiment, is expected. Exports accelerated as supply bottlenecks eased and services rebounded as Covid restrictions were becomes more challenging removed. CPI inflation surprised on the upside in February, with the In contrast to many other central headline breaching 2%. With the surge in energy and commodity banks, the SNB maintains a dovish prices and renewed disruptions to supply chains due to the war in stance and guidance, with rates Ukraine, upward price pressure will remain in place. Domestically

expected to be on hold in 2022

demand for safe haven assets

Upward pressure on the Swiss franc

remains as the war in Ukraine drives

generated inflation is relatively benign though, with both services and domestic goods price inflation still well below 2%. The SNB maintained

a dovish stance in the March meeting, in line with our view that rates

will be unchanged in 2022.

Key developments

Zurich's view

Japan

- As new Omicron infections recede, consumer spending starts to recover
- Supply chain bottlenecks and labour shortages hit manufacturing production
- Japanese equities recover as the ven weakens

Japan's economic activity slowed during the first two months of this year. Consumer sentiment and spending were negatively impacted by the sudden increase in Omicron infections, while the manufacturing sector again suffered from labour shortages and new supply chain bottlenecks. Some of these pressures appear to have eased, which makes the outlook for Q2 brighter, following a probably negative GDP growth print for Q1. Headline inflation is picking up, while core inflation remains negative. Adjusting for special factors, even core inflation has started to rise, though at a slow pace. The MSCI Japan has recovered, rising for seven days in a row, while the yen has depreciated versus the dollar to the USDJPY 122 mark amid the monetary policy gap between the US and Japan.

China

- Production, infrastructure investment and retail sales fared better than expected in January/February
- New Omicron infections rise, negatively impacting services consumption
- Chinese equities experience a strong recovery following a steep plunge

Economic indicators like industrial production, investment spending and retail sales for the combined period of January/February (adjusting for the impact of Lunar New Year) came in better than consensus had expected. However, we are concerned about the impact that rising Omicron infections in various provinces, particularly in Shenzen in the Greater Bay area, will have on both the services consumption and semiconductor related industries. Meanwhile, home sales remain lackluste but should benefit from policy easing measures later this year. A selling spree of foreign listed Chinese equities also impacted domestic 'A'-shares, urging a strong statement by China's Vice Premier and various government agencies, which helped to ease concerns and was followed by a V-shaped recovery.

Australia

- The domestic economy is in good shape as the country is opening up again
- Expectations regarding the RBA's first policy rate hike are tilted towards June instead of Q3
- Australian equities are meandering higher, particularly relative to global equities

Australia's economy is booming, with some segments close to overheating. As new Covid infections are abating and household savings remain solid, consumers are on a spending spree, with housing and business investment solid as well. Inflationary risks are rising, but the RBA is focusing more on the trimmed-mean inflation measure and wage inflation, which so far are in acceptable ranges. However, the latest March minutes reveal that the pendulum may be swinging towards early concerns about risks to its 'patient' outlook. This brings June into focus for a first policy rate hike instead of Q3. The ASX200 equity market index has already recovered ¾ of its January losses, and has outperformed global equities, while the 10yr yield has surged by about 110 bps to 2.77%.

ASEAN

- Fuel subsidy reform may be slower amid the impact of rising oil prices
- Central banks are not in a hurry to hike policy rates
- Equity markets remain volatile, with Indonesian equities expected to outperform

In Malaysia, January industrial production was up only 4.3% YoY, weaker than expected, and sequentially fell below the Q4 2021 level with both mining and, to a smaller extent, manufacturing contributing negatively. February export growth weakened. Fuel subsidies will increase amid rising oil prices and will be a burden for the fiscal budget. Core inflation is rising, but is still regarded as contained by the BNM, suggesting the first rate hike will come in July. Meanwhile, Indonesia is benefitting from the reopening boom, but higher food prices may dent consumer confidence, which again may make it more difficult to implement fuel subsidy reforms at the intended pace. The MSCI ASEAN is expected to remain in its volatile sideways trading band, while the MSCI Indonesia has the potential to inch higher.

LatAm

- Central banks continue to tighten as inflation expectations remains high, but the cycle is close to its end
- Brazil's Q4 GDP grew above market expectation and marked the end of a technical recession, but January economic activity disappointed
- The MSCI LatAm continued to outperform emerging and global markets for a fourth consecutive month, led by Brazil

Inflation continues to be the region's most important economic concern and is expected to remain well above target during 2022. Core inflation accelerated, reaching a multi-year high, while inflation expectation increased due to higher commodities prices. Central banks are under pressure and are likely to continue tightening during Q2 2022, maintaining higher policy rates for an extended period. High interest rates are providing an attractive carry for investors, supporting regional currencies and helping the BRL to reach its strongest level since Jun 2020. The equity market has been resilient and continues outperforming emerging and developed markets. Economic activity continues to decelerate and is expected to be negatively impacted by the geopolitical crisis, despite the improvement in the Covid situation.

The analysis contained and opinions expressed herein are based on numerous assumptions concerning anticipated results that are inherently subject to significant economic, competitive, and other uncertainties and contingencies. Different assumptions could result in materially different conclusions. All information contained in this publication have been compiled and obtained from sources believed to be reliable and credible but no representation or warranty, express or implied, is made by Zurich Insurance Group Ltd or any of its subsidiaries (the 'Group') as to their accuracy or completeness.

Opinions expressed and analyses contained herein might differ from or be contrary to those expressed by other Group functions or contained in other documents of the Group, as a result of using different assumptions and/or criteria.

The Group may buy, sell, cover or otherwise change the nature, form or amount of its investments, including any investments identified in this publication, without further notice for any reason.

This publication is not intended to be legal, underwriting, financial investment or any other type of professional advice. No content in this publication constitutes a recommendation that any particular investment, security, transaction or investment strategy is suitable for any specific person. The content in this publication is not designed to meet any one's personal situation. The Group hereby disclaims any duty to update any information in this publication.

Persons requiring advice should consult an independent adviser (the Group does not provide investment or personalized advice).

The Group disclaims any and all liability whatsoever resulting from the use of or reliance upon publication. Certain statements in this publication are forward-looking statements, including, but not limited to, statements that are predictions of or indicate future events, trends, plans, developments or objectives. Undue reliance should not be placed on such statements because, by their nature, they are subject to known and unknown risks and uncertainties and can be affected by other factors that could cause actual results, developments and plans and objectives to differ materially from those expressed or implied in the forward-looking statements.

The subject matter of this publication is also not tied to any specific insurance product nor will it ensure coverage under any insurance policy.

This publication may not be reproduced either in whole, or in part, without prior written permission of Zurich Insurance Group Ltd, Mythenquai 2, 8002 Zurich, Switzerland. Neither Zurich Insurance Group Ltd nor any of its subsidiaries accept liability for any loss arising from the use or distribution of publication. This publication is for distribution only under such circumstances as may be permitted by applicable law and regulations. This publication does not constitute an offer or an invitation for the sale or purchase of securities in any jurisdiction.
